

# HTM71 Storage for healthcare items and consumables

It has never been more important for the NHS to achieve greater levels of cost-effectiveness.

One way in which this can be achieved is through the use of better organised, more efficient stock control, storage, distribution and purchasing systems.

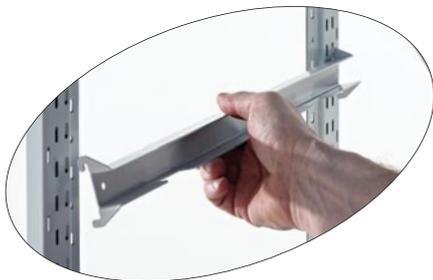

The Health Technical Memorandum 71 (HTM71), which was drafted and published by NHS Estates, recommends using high density modular storage systems because they provide more storage space and greater flexibility at a lower cost than the alternatives.

The Moresecure HTM71 shelving model allows you to either double your storage capacity or halve your storage footprint compared to traditional shelving systems.

And with a high load capacity of up to 120kg per bay, our shelving system, which is built specifically to accommodate a range of medical trays, will more than cope with the demands of a busy clinical environment.

*Sloping tops are beneficial in hygiene sensitive locations and prevent items from been stored on top of units encouraging better house keeping. They also help prevent dust accumulation, provide for ease-of-cleaning, and aid in keeping areas sterile.*

*The position of the trays can be easily adjusted to allow a mix of sloping or horizontal positions and different basket or tray depths.*

*Optional trolley version features braked castors ensuring easy movement of modules for cleaning and relocating.*

# HTM71 Storage

It comes with a range of extendable modules, which are available in flat pack for easy storage and delivery and accommodate 600 x 400 mm baskets and trays.

Importantly for a hygiene-sensitive environment, modules are finished with light grey powder coating that incorporates BioCote® anti-microbial, silver-based technology.

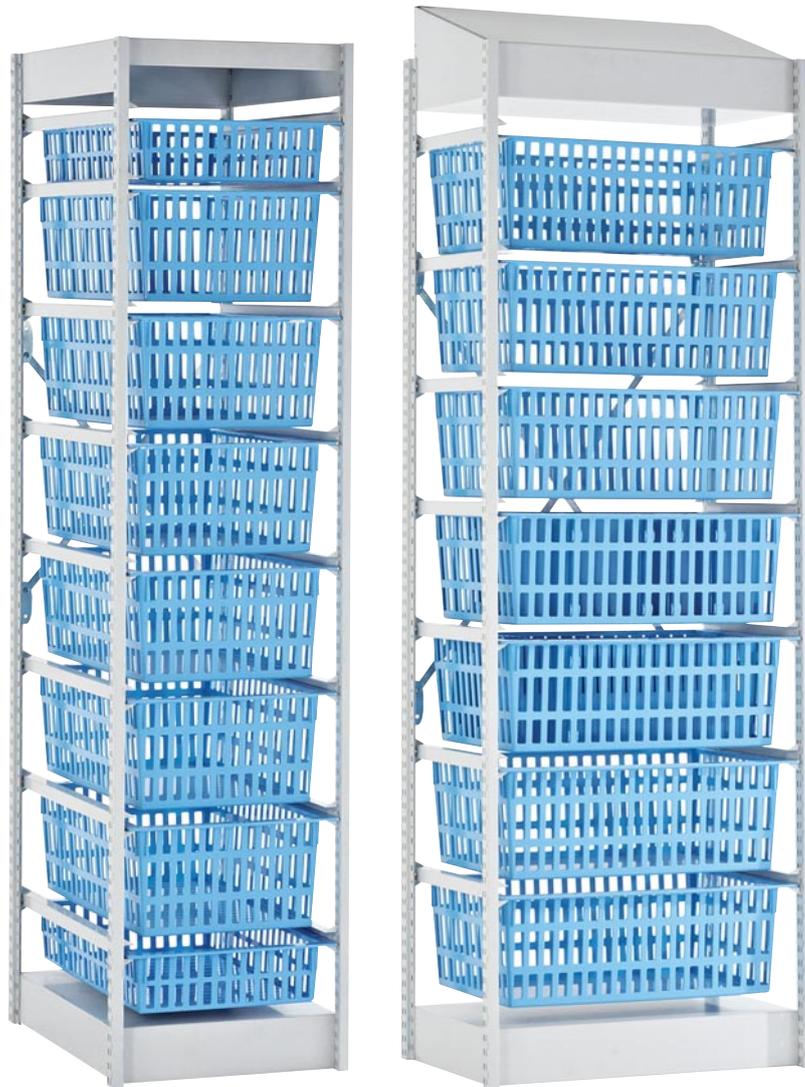

What else can you expect from the Moresecure HTM71 unit?

- A choice of sloped or horizontal runners, which can be inter-changed to give total flexibility in mix of baskets and trays stored.
- Starter and extension units, to save space and cost.
- Optional sloping tops to improve hygiene.
- Fully open units, which provide all stored items to be easily viewed and to make cleaning easier.
- Runners with locating slots that work with tray slots, improving safety and operation.
- Easy-to-adjust clip-in runners.
- Optional castors that allow for the smooth movement of units, ensuring easy access for cleaning of floors etc.
- Sloping tops, which prevent dust accumulation and prevent items from being stored on top.

BioCote® is clinically proven to reduce levels of bacteria in contact with the surfaces by 99% in just two hours. It also provides continuous built-in anti-microbial protection for the expected lifetime of the product, making it ideal for clinical areas.

All BioCote®-protected products are subject to regular quality control testing (ISO 22196) by an independent UK laboratory, supported by in situ product testing in real-life environments.

## Baskets and Trays

We offer a range of rigid and shock-resistant solid-base baskets and trays.

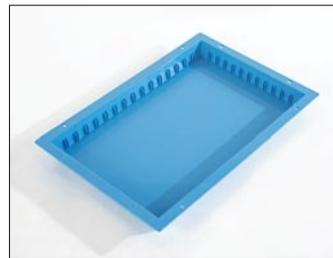

Trays are capable of withstanding temperatures of up to 85°C and can accommodate a maximum load of 20kgs.

Solid base provides protection against spilled liquids and particles.

Baskets are available in 2 depths: 200 or 100mm.

Trays are available in 3 depths: 200mm, 100mm or 50mm..

Baskets and trays can be subdivided as required.
